

Internal Workflow & Deadline Tracking System

For Finance Teams and CA Firms in India

Finance teams manage a large volume of recurring and time-sensitive work — including GST-related activities, payroll processes, audits, reporting, and ad-hoc finance tasks. While the work itself is usually well understood, tracking it across people, dates, and documents often becomes fragmented.

- Deadlines are tracked in spreadsheets
- Follow-ups happen on WhatsApp or email
- Status updates depend on manual check-ins

Over time, this leads to missed follow-ups, last-minute stress, and unnecessary rework.

This system is designed to address that operational gap.

What This System Is

This is a **custom-configured internal workflow and deadline tracking system** built for finance teams, CFO offices, and CA practices.

It provides a single place to:

- View all ongoing and upcoming obligations
- Track due dates clearly
- Assign responsibility to team members
- Monitor task status and delays
- Store relevant documents alongside work items

The system does **not** change how compliance is performed.

It helps teams **organize, track, and execute** their existing processes more reliably.

User Roles and Views

The system is structured around clear roles so each user sees only what they need.

1. Admin / Manager (CA Partner, CFO, Finance Manager)

- Defines obligations and recurring work
- Creates and assigns tasks
- Monitors overall progress and delays
- Reviews workload distribution
- Oversees document availability

Primary focus: visibility, control, and accountability.

2. Team Member (Junior, Executive, Accountant)

- Views assigned tasks and deadlines
- Updates task status
- Uploads documents and workings
- Works from a clear, prioritized task list

Primary focus: execution of assigned work.

3. Leadership / Oversight (CFO, Partner, Senior Management)

- Views high-level status of obligations
- Identifies overdue or at-risk items
- Reviews completion trends and bottlenecks
- No involvement in task-level updates

Primary focus: confidence that work is under control.

Problems It Helps Address

- Deadlines being missed or noticed late
- Lack of clarity on who is responsible for what
- Manual follow-ups by seniors or managers

- Limited visibility into team workload and progress
 - Documents scattered across email, Drive, and chat tools
-

How It Works (Practical Flow)

Define obligations

Recurring or one-off work is listed (monthly, quarterly, annual, or event-based).

Shared calendar view

All deadlines are visible in one place, including upcoming and overdue items.

Task creation and assignment

Each obligation is broken into tasks and assigned to specific team members.

Automated reminders

Assignees receive notifications so follow-ups don't rely on manual chasing.

Progress visibility

Managers and leadership can see status without constant check-ins.

Document attachment

Files, workings, and proofs are stored directly with the related tasks.

What This System Is Not

To avoid any confusion:

- Not a GST, TDS, or income-tax filing tool
- Not tax advisory or compliance decision software
- Not connected to government portals
- Not an ERP replacement

All compliance decisions and filings remain fully with the client's team or advisors.

Who This Is Useful For

- CA firms managing multiple client accounts
- CFOs overseeing internal finance teams

- Teams with juniors, reviewers, and approvers
 - Organizations where missed deadlines create operational or reputational risk
-

How It Is Delivered

This is **not** sold as an off-the-shelf product.

The engagement typically includes:

- Understanding existing workflows
- Configuring roles, tasks, and calendars
- Setting up reminders and visibility rules
- Training users and refining the setup over time

The focus is on **practical adoption**, not software complexity.

Intended Outcome

- Clear ownership of work
 - Better visibility into deadlines and progress
 - Reduced manual follow-ups
 - Fewer last-minute escalations
 - More predictable execution of finance operations
-
